### CONNECT TO NETWORKS AND DEVICES

Your phone can connect to a variety of networks and devices, including Wi-Fi, GPRS, Bluetooth, devices, such as headsets. You can also transfer files to/from your PC through the data cable.

#### Connect to the Internet

To configure your Internet:

1. Go to [Settings]-[Wireless and Networks]-[More]-[Mobile Networks]-[Network settings]-[Access point names].
2. Select the access point name or change the access point name for your Internet connectivity as provided by the service provider of your SIM card.

By default, your network provider sends the access point name settings via SMS, or it comes with your SIM card. You may need to install these settings. After this, you can choose from the listed access point names. If the access point names are not listed by default, please contact your network provider for the same.

#### Access Internet via Wi-Fi

To browse the Internet via Wi-Fi:

1. Go to [Menu]-[Settings]-[Wireless and Networks] and then tap WLAN.
2. Next, select the Wi-Fi connection listed under Wi-Fi networks.

#### Pair With Bluetooth Devices

1. Go to [Settings]-[Wireless and Networks]-[Bluetooth] to

turn it on. Your phone scans and displays the Bluetooth devices in range.

2. Tap Search for Devices. Also set Bluetooth preferences from here.

3. Touch the ID of the other device in the list in Settings to pair them. If you are prompted for a password, enter the password as suggested on the devices to be paired.

### HEALTH AND SAFETY PRECAUTIONS

#### SAR Compliance

Your phone is designed not to exceed the limits of emission of radio waves recommended by international guidelines. SAR (specific absorption rate) is the measurement of body-absorbed RF quantity when the phone is in use. SAR value is ascertained according to the highest RF level generated during laboratory tests.

The SAR value of the phone may depend on factors such as proximity to the network tower, use of accessories or other accessories.

The highest SAR value of the device at the head and body are 0.480 W/kg and 1.239 W/kg respectively averaged over 1 gm of human tissue.

#### SAR Recommendations

Use a wireless hands-free system (headphone, headset) with a low power Bluetooth emitter.

Make sure the cell phone has a low SAR.

Please keep your calls short and use SMS whenever more

convenient. This advice applies especially to children, adolescents and pregnant women.

Prefer to use your cell phone when the signal quality is good.

People having active medical implants should preferably keep the cell phone at least 15 cm away from the implant. Maintain a preferable distance of 15 mm from the device.

#### World Health Organization (WHO) Advice

Organizations such as the World Health Organization and the US Food and Drug Administration have stated that if people are concerned and want to reduce their exposure they could use a hands-free device to keep the phone away from the head and body during phone calls, or reduce the amount of time spent on the phone.
